

SiforAGE: Social Innovation for Active and Healthy Ageing

**Proyecto y Guía de recomendaciones para Elaboración
de Políticas Públicas**

Barcelona, 15 de Octubre de 2015

The Challenge

SiforAGE (Social Innovation on Active and Healthy Ageing for sustainable economic growth) aims at **promoting Active and Healthy Ageing (AHA)** in society by **strengthening cooperation** between researchers, product- and service-developers, policy-makers, and civil society organizations across the social spectrum.

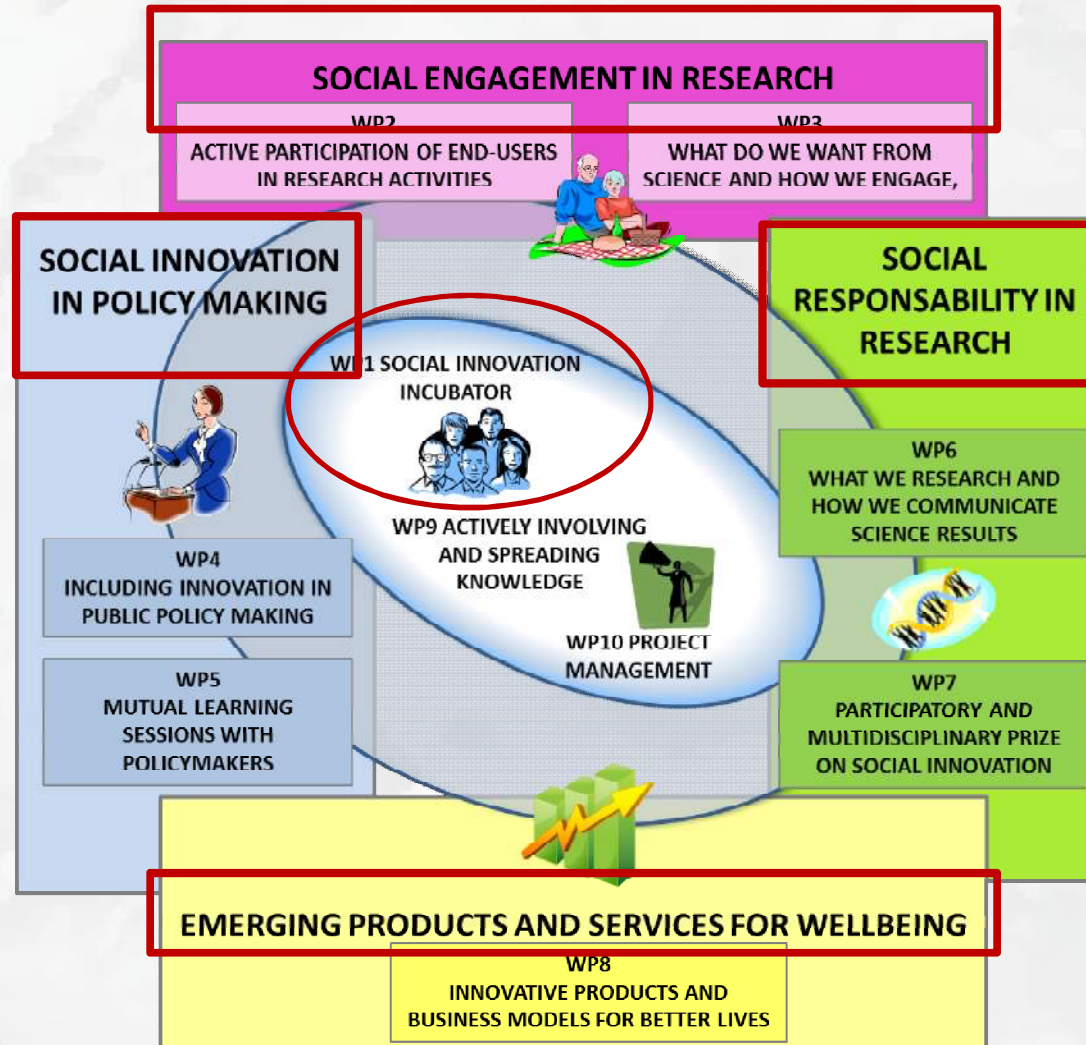

Some of the key challenges of SiforAGE are:

- to **promote the inclusion of knowledge coming from science into the society**, through policy-making and the development of innovation and technologies;
- to **promote the involvement of society in research**, in order to allow end-users to shape future research that can improve AHA;
- to improve existing mechanisms for the **introduction into the market of innovative products** and service solutions for older persons.

18 partners in Europe, Turkey and Brazil

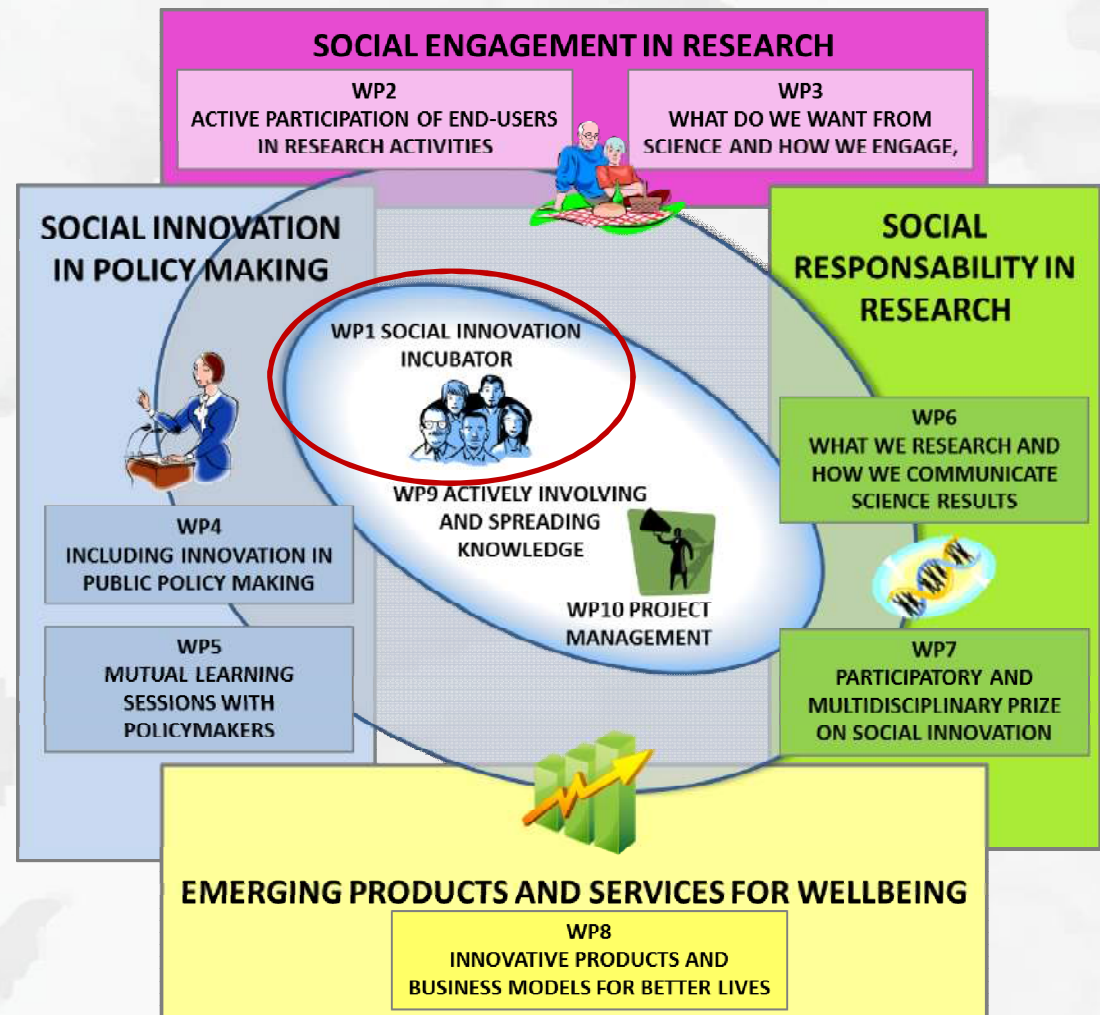

Social Innovation Incubator

Creation of a **social incubator** in which all stakeholders:

- exchange ideas, debate, and collaborate to promote AHA;
- collect and analyze examples of good practice across Europe;
- disseminate results amongst all stakeholders, through five Knowledge Management Units (KMUs).

SiforAGE

Knowledge Management Units

Knowledge Management Units (KMUs) are **participation forums for stakeholders working in active and healthy ageing**, from researchers, civil society organizations, companies, public practitioners, think-tanks... KMUs are the horizontal mechanisms that support and provide foundation data to Work Packages. Five KMUs are effective in SiforAGE:

KMU1: Healthy ageing for healthier living years

KMU2: Mental capacity and Alzheimer's

KMU3: Active participation and inclusion in society. Inequalities associated with ageing

KMU4: Social innovation in community partnerships for AHA

KMU5: Services and technologies for better ageing at home

Focus on two Knowledge Management Units

KMU1: Healthy ageing for healthier living years

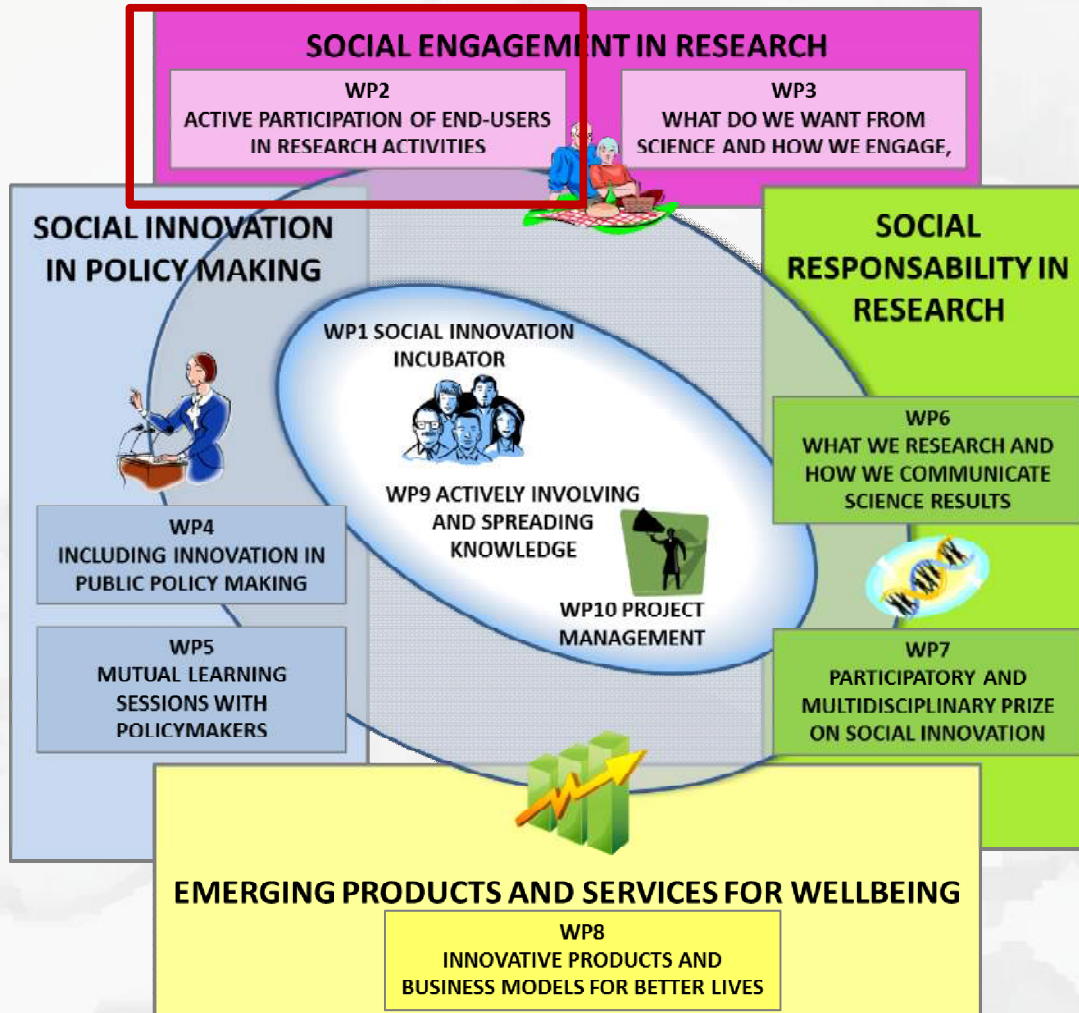

To identify interventions which will support healthy life expectancy and empower people to be responsible for their own healthy ageing.

1. To map the key concepts which underpin "Healthy ageing for healthier living years";
2. To understand the barriers to increasing healthy ageing and healthy life expectancy;
3. To gather examples of successful interventions across Europe which address these barriers.

KMU5: Services and technologies for better ageing at home

1. To achieve a better understanding of the specificities and requirements of innovation in care services and at home combining different points of view: user, stakeholder, ICT developers, gerontologist, etc.
2. To better understand how innovation in care services using ICTs is more than the mere use of a technological innovation. Technologies must be integrated in the home-based care model.
3. To identify / illustrate key elements to success when developing services and technologies seeking to keep older people in their homes.

Social Engagement in Innovation

Objectives of WP2

To enable the dialogue between older persons and representatives of assistive technologies designed for older users.

To engage in this dialogue all stakeholders involved in proliferation of new assisted living technologies to daily lives of older people.

Technology Experience Cafés (TEC)

for integrating end-users into technology-, product- and service-development

Objective: to open research/innovation activities to older persons, who have the opportunity to directly speak to researchers and developers of assistive technologies, and test and give their opinion about recent devices, solutions and products offered on the market for them.

TEC is the place where **older people** gain an insight into the future technologies; get an aspiration to engage with the technology world and socialize. At the same time, **researcher** and **technology developers** can get an important feedback on their early prototypes to steer the further Research and Technological Development activities.

PROFILS RECHERCHÉS

Les utilisateurs doivent être majeurs. Les usagers à la retraite devront indiquer le dernier poste occupé et l'employeur. Les usagers actifs devront avoir une activité professionnelle ou personnelle en lien avec le secteur de la santé, les politiques de santé ou l'accompagnement de la personne âgée.

Donnez votre avis sur les technologies du futur !

15 / 16 OCTOBRE
TECHNOPOLE DE L'AUBE EN CHAMPAGNE À TROYES

pour participer contactez Bernard STREE
COURRIEL: siforage@carinna.fr / TÉL: 03 26 85 84 88
(INSCRIPTION OBLIGATOIRE- PARTICIPATION GRATUITE)

CARINNA l'Agence pour la recherche et l'innovation en Champagne-Ardenne, en partenariat avec le Living Lab ActiAgeing en lien avec l'initiative Domosol-decine en Champagne-Ardenne **vous invite à participer au Technology Experience Café (TEC)**
Dans une ambiance conviviale et autour d'un café, vous découvrirez et expérimenterez les technologies de demain liées à l'autonomie en à la santé. Vos avis et commentaires seront recueillis par les développeurs afin d'améliorer ces futures technologies et d'identifier les freins à leur utilisation.

Social Engagement in Research

Objectives of WP3

- Gain better knowledge on the mechanisms that could facilitate cooperation of CSOs representing older persons and the society with research community.
- Engage the society, and especially older persons, in the definition of research needs and priorities, and to improve the channels of communication with researchers and decision makers.

Focus groups with older persons

Identification of:

- the needs of older persons
- the barriers for contributing to research
- older persons' perspective on how research could contribute to their well-being

Objective: identifying priority situations and fundamental needs that can become topics of scientific interest.

Good practices examples

Older persons' active participation and inclusion in society: How to overcome obstacles and barriers? Good practice example

One of the main objectives to be achieved by collecting good practices – and bad practices – is to **identify truly innovative approaches** to the key issues of the WP3.

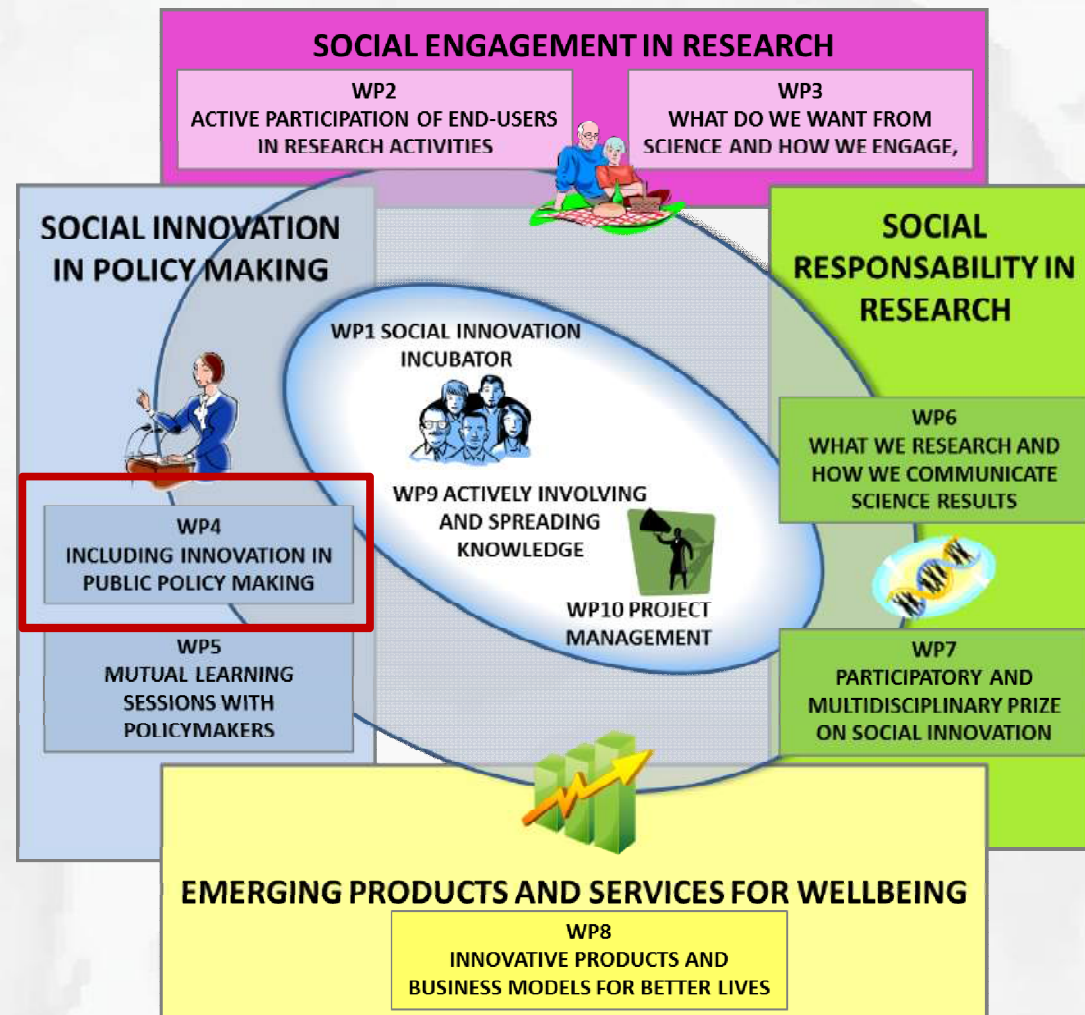

More than 100 good practice example collected / Examples related to food:

- Administrative support in the frame of the delivery of lunch at home
- Intergenerational garden: sharing knowledge and know-how among generations while gardening and cooking.
- Social urban vegetable gardens: specific training in organic farming for older persons

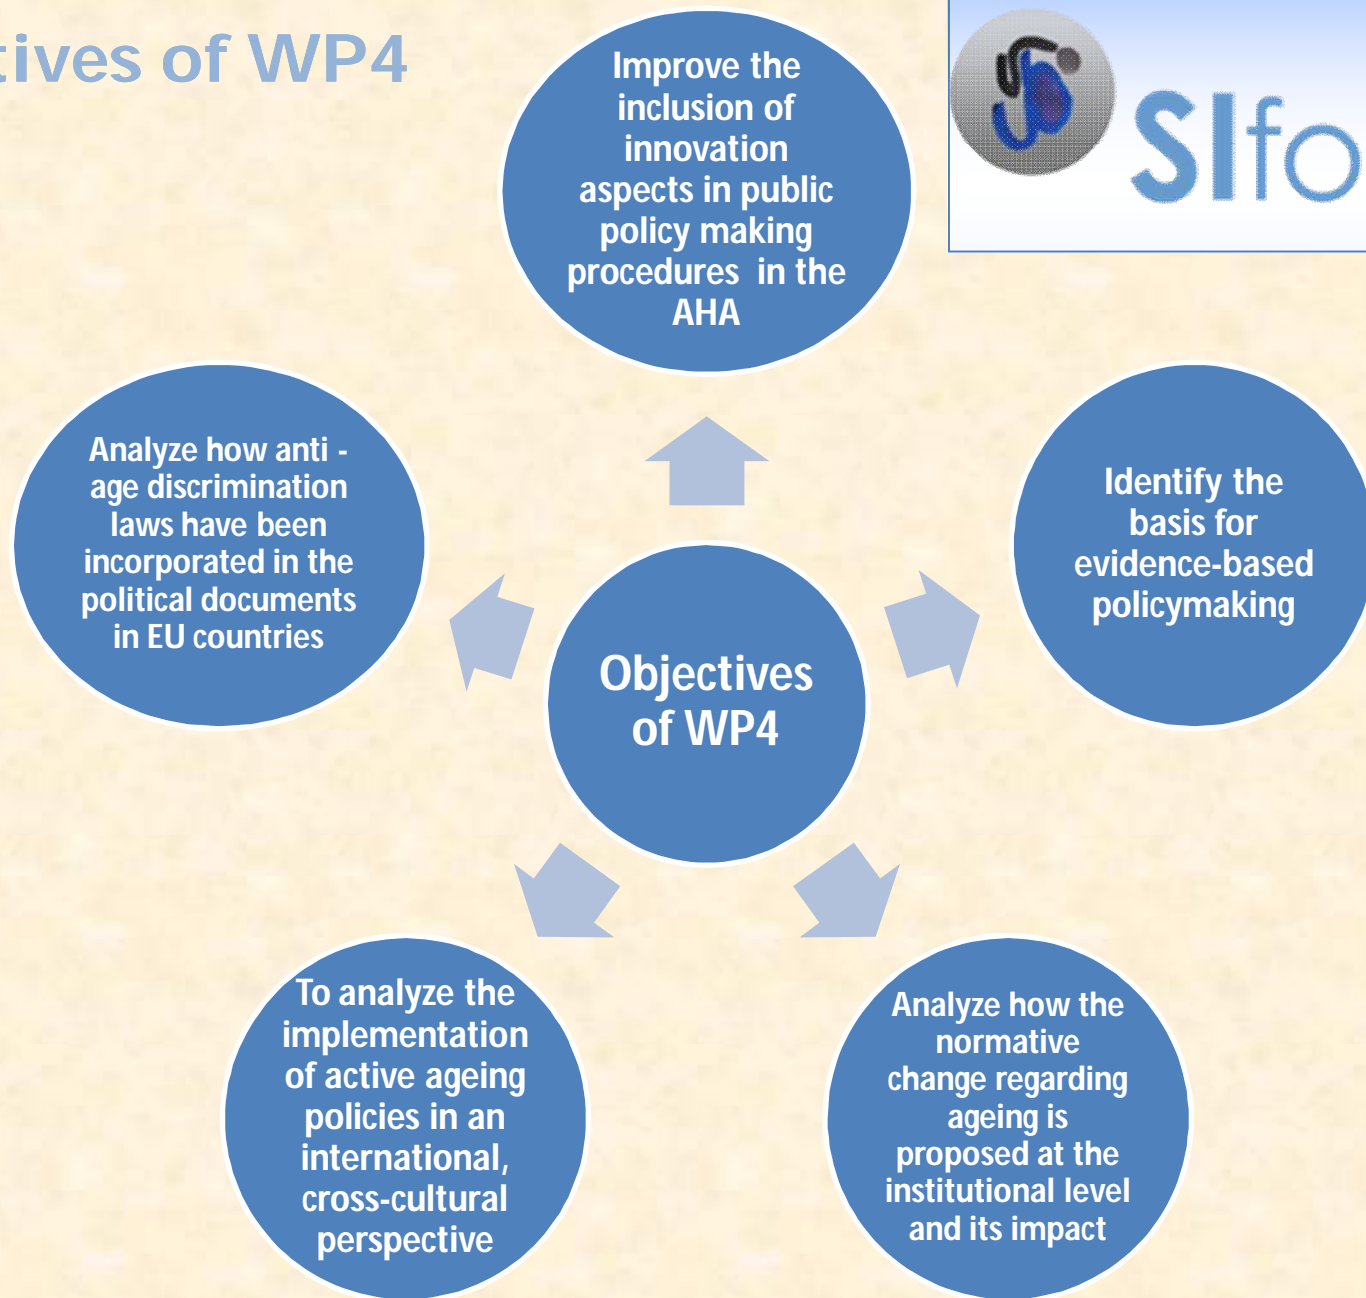

Intervention programmes with children for preventing ageist attitude

Social Innovation in Policy making

Objectives of WP4

Analysis report on ways to design policies on active and healthy ageing

Comparison on the implementation of active ageing policies in an international and cross-cultural perspective

Identification of innovative approach in policy making in ageing- Evidence-based policymaking

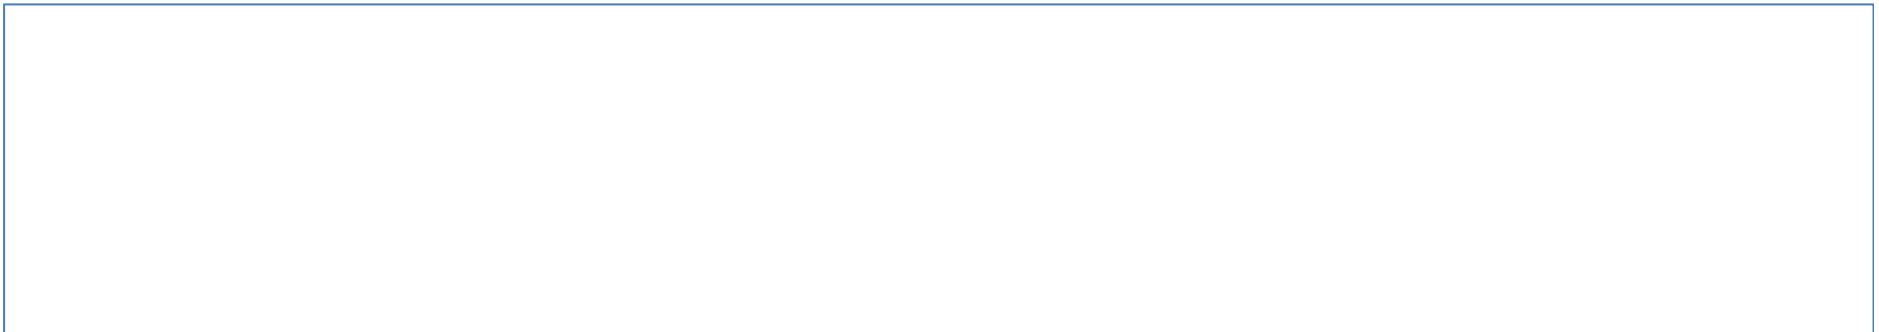

SiforAGE

Best practices on
evidence-based
policymaking
and policy
recommendations
on Active and
Healthy Ageing

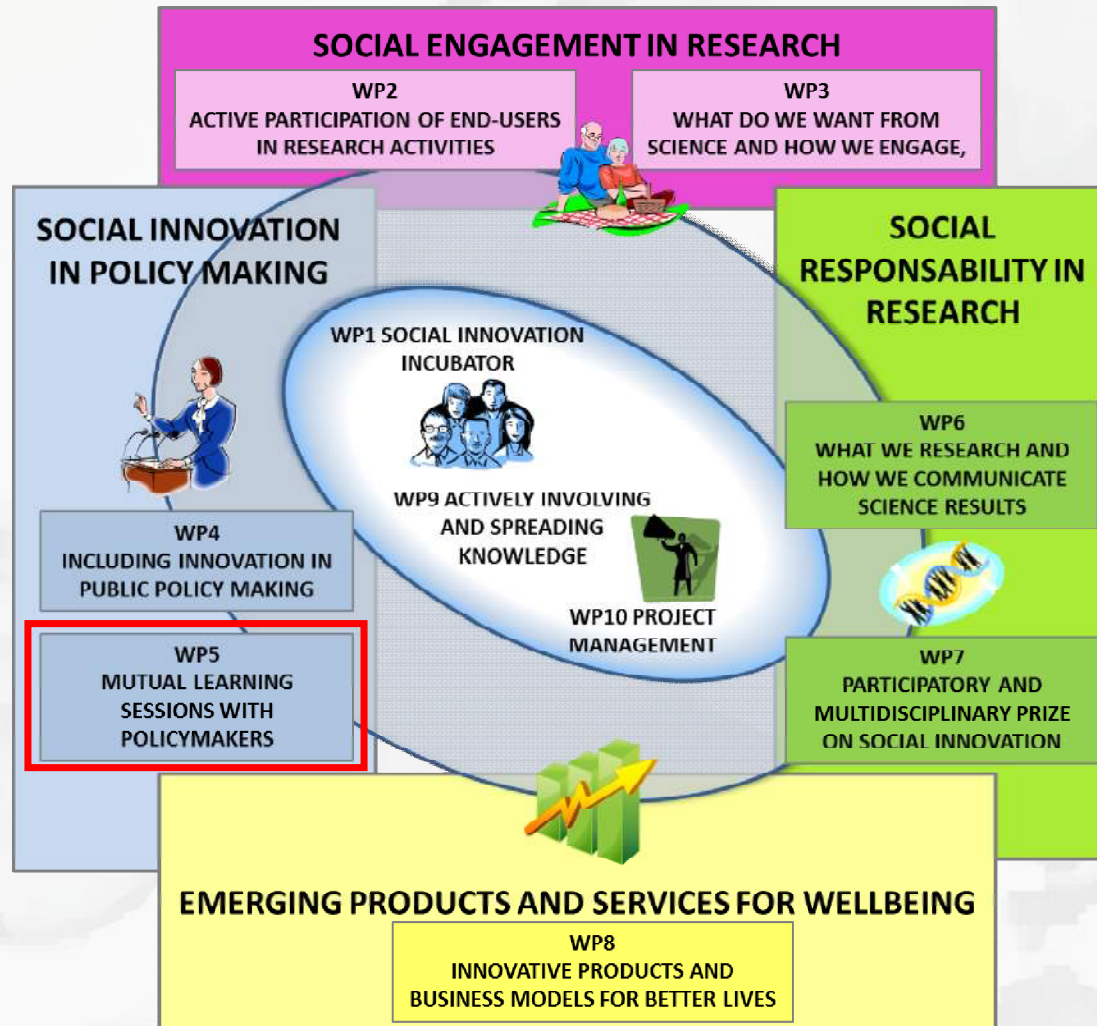

Available here: www.siforage.eu

- get serious about ageing**
- diversity of older people**
- “nothing about us without us!”**
- scaling up of pilot projects**
- life-course approach**

Social Innovation in Policy making

Objectives of WP5

- Improve the **participation of policymakers** at different levels in the research making process
- Increase awareness of the importance of their involvement for ensuring a higher **impact of research in society** and a better coordination with research policies

Public Events Location

SiforAGE Policy Makers Involvement Strategy

Mutual learning sessions for policy makers

TURIN

KRAKOW

LISBON

SAN SEBASTIAN

REIMS

SHEFFIELD

Policy Makers Involvement

- 6 local events for the presentation of the platform to Policy Makers.
- **Tutoring** and **monitoring** on line
- Specific **tools** to facilitate **interactions** and recording communications
- Extensive **involvement of stakeholders**

SIforAGE

Envisaged Impacts

- To **improve the governance** of research- and technology-development into AHA and on life-course perspective;
- To **facilitate sustainable and inclusive solutions** to the ageing challenge in European society;
- To **incorporate science in society issues** into the system of ageing research, by creating new forms of dialogue and cooperation at different stages of the research and innovation process;
- To **promote responsible research** innovation and ethics in ageing research;
- To **improve transnational cooperation** within the healthy ageing paradigm.

SiforAGE

MUCHAS GRACIAS!!!!
